# Empowering the next generation of pediatric specialists.

Advances in pediatric medicine come when dedicated specialists work to discover the causes and cures for childhood diseases. The CRCM is a training ground for the specialists of the future, providing mentoring and support for investigators, fellows, residents, and medical students. This support ensures that research to develop better treatments and cures for children will continue.

Investigators analyze study results, study design, and prepare conclusions for publication. This support strengthens investigators' ability to compete for major research grants and ensures that important discoveries are shared with other children's hospitals.

- Physicians authored an issue of the medical journal *Progress in Pediatric Cardiology* that focused on innovations for pediatrics
- Spearheads projects in genetic medicine, cancer, HIV, infections, congenital heart defects, prevention and wellness, and improving management of chronic illnesses

---

Help empower the next generation of pediatric specialists and advance possibilities by visiting [CHMFoundation.org/CRCM](https://CHMFoundation.org/CRCM) or calling 313.745.0318.
